

Security Update: iOS 7.0.3 for iPhone 4 and Later Released to Address Multiple Vulnerabilities

iOS 7.0.3 for iPhone 4 and Later Released to Address Multiple Vulnerabilities

Status Type

Security Update

Private

Public

Date and Time

Tuesday, October 22, 2013 - 15:43

Reason

Security Update

Impact

iPhone 4 and later Users

WHAT HAPPENED?

Apple released iOS 7.0.3 update for the iPhone to address multiple vulnerabilities.

Advanced Users: For a complete description of the security enhancements and affected software refer to Apple Security Updates ^[1] where Apple will post the full report.

AFFECTED SYSTEMS:

- iPhone 4 and later

WHAT'S THE PROBLEM?

Out of date iOS could allow an unauthorized individual who has physical access to the device to make calls or view passcodes.

HOW DO I PROTECT MY COMPUTER?

Update your software

1. If you have a computer support coordinator (CSC), no action on your part is required.
2. If you do not have a CSC or they do not support your iPhone updates may be obtained through iTunes [2] only.

Installation note:

Since the automatic update process may take up to a week depending on the day that iTunes checks for updates, Apple recommends you manually obtain the update via the "Check for Update" button within iTunes. After doing this, the update can be applied when your iPhone is docked to your computer.
